

Composite priority score

Shapley-weighted (the app's default basis) · population-gated

Priority (0-100) · observed 3-87

Weighted mean of the nine subgroup scores — physiological vulnerability and behaviour & mental health carry a 0.00× multiplier under this basis and do not enter it. Scaled by residential population — full weight at 50+ residents, so 595 of the 10,081 scored cells are held down for thin population. Cells with no residents or no indicator data are blank.
